(ggccattateggcc); Site_2: Sfil (ggccgctcggcc); Library is oligo-dT primed and directionally cloned. cDNA was prepared from a pooled samples of tissues from Skin, meninges, duramatter, pia matter and choroid plexus. and 3' adaptors were used in cloning as follows: 5' adaptors were used in cloning as follows: 5' adaptors sequence: 5'-CACGCCATTATGGCC-3' and 3' adaptor sequence: 5'-CACGCCATTATGGCC-3' and 3' adaptor sequence: 5'-CATGTAGGCCGACGCGACATG-dT(30)BN-3' (where B = A, C, or G and N = A, C, G, or T). Average insert size 1.77 kb (range 0.50-4.0 kb). 15/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo Alto, CA). Note: this is a NIH_MGC Library"

This is the 5' sequence of the clone insert. Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKFZ);
Email s.wiemann@dkfz-heidelberg.de; sequenced by Medigenomix
(Martinsried/Germany) within the cDNA sequencing consortium of the
German Genome Project. This clone (DKFZp469C2337) is available at
the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:

Planning was purified using a modified alkaline lugis method. Semiencing reactions were	conducted using the DYEnamic Cycle Sequencing Kit for MegaBACE (Amersham biosciences) according to the	manufacturer's recommendations. Clones were sequenced by the 5' end with T7 primer. Sequencing reactions were	analyzed on MegaBACE1000 DNA Sequencer (Amersham biosciences). The quality and clustering of the ESTs were	analyzed using the Sottwares Fired/Labs. Unly Est sequences with Phred quality greater than 20 and at least 150 bn ware considered for chiefering "	ORIGIN	No.: 2.63e-93 Length:	SCOIE: 839.00 MACCHES: 1/5 Percent Similarity: 96.28% Conservative: 6 Best Local Similarity: 93.09% Mismatches: 6

/note="Organ: Pooled-Glandular; Vector: pDNR-LIB; Site_1:
Sfil (ggccattatgggc); Site_2: Sfil (ggccgctcggcc);
Library is oligo-dT primed_and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGGCGCGCACATGAGGCGCACATGGGNS 13 olbn3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH_MGC Library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 23,

exhibit one or more activities selected from the following: cytokine activity; cell proliferation; differentiation; immune modulation; heamatopoiesis regulation; tissue growth activity; activin/inhibin activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic activity; anti-inflammatory activity; haemostatic and thrombolytic activity; anti-inflammatory activity; haemostatic and thrombolytic proteins may be administered to patients as vaccines, and the nucleotides of may be used as part of a gene therapy regime. Diseases or conditions that can be treated using the proteins or nucleotides of the invention include autoimmune diseases; genetic disorders; haemophilia; cardiovascular diseases; cancer; bacterial; fungal and viral infections, especially HIV; culliple sclerosis; rheumatoid arthritis; pulmonary inflammation; culliples creations such as asthma and anaemia. They may also be used for treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin activity may additionally be useful as contraceptives. Nucleic acid as a curivity may additionally be useful as contraceptives. Nucleic acid as source of diagnostic primers and probes. The present sequence represents

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-inflammatory, immunosuppressive, osteopathic, cytostatic, neptrotropic activity. The polymerication antipsoriatic and hepatotropic activity. The polymucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma, anaemia, tymphoma, melanoma, myeloma or sarcoma, anaemia, crohn's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABU11450-ABU11455 described in the disclosure of the invention. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 854
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LMWVFTYVGALFNGLTLLILALISLFSVPVIYERHOAQIDHYLGLANKNVKDAMAKIQAK 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          915 IMMVFTYVGALFNGLTILILALISLFSVPVIXERHQAQIDHYLGLANKNVKDAMAKIQAK 974
                                                                                                                                                                                                                                                                                                                                                        New purified disease detection and treatment molecule proteins and polynucleotides, useful for diagnosing, treating or preventing cancers (e.g. leukemia or sarcoma), anemia, Crohn's disease, AIDS, osteoporosis or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    795 SVVDLILYWRDIKKTGVVFGASLFLLLSLTVFSIVSVTAYIALALLSVTISFRIYKGVIQA

The human Nogo sequence was derived by aligning human expressed sequence tags (ESTS) c.g. AALS8636, AA33267, AA081785, AA322918, AA092565, AA081525 and AA081840 with the rat Nogo sequence. Nogo proteins and fragments comparing serveth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, gliobhastoma, caniopharyngioma, ependyoma, pinealoma, nenagioma, neuroblastoma or retinobharyngioma, oligodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign CR dysproliferative diseases. Sporiasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit promote structural plasticity of the CNS in disorders where neurite

growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. Note: SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification. However the specification does not include sequences for these SEQ ID numbers

The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides
